CUSTOM SOFTWARE ENGINEERING FOR ALTERNATIVE ASSET MANAGERS

Experienced financial systems engineering. Faster development with AI.

Third Life Software builds custom applications, data platforms, integrations and operational automation for hedge funds, private equity firms and other alternative asset managers. We have over twenty years experience and have worked with more than 50 funds. AI-assisted development lets us build production software in a fraction of the time at a fraction of the cost.

20+
years building alternative asset management software

50+
investment funds served, hedge fund and private equity

4x
faster software development lifecycle compared to traditional approaches

WHAT WE BUILD

Investment management applications. Security master, portfolio monitoring, treasury, risk, compliance and operational workflow systems.

Data integration. Portfolio accounting, trading, risk and fund administration systems connected, with ingestion, transformation and validation.

Data warehousing. Design and implementation of data warehouses that consolidate accounting, trading, administrator, risk and market data. A core area of our work for over two decades.

Reporting and analytics. Financial reporting, portfolio analytics, dashboards and automated reporting. Modernization of legacy reports and complex Excel processes.

Workflow automation. Reconciliations, data validation, exception management, approvals and recurring business workflows.

HOW WE WORK

Direct ownership. We sit with the people who do the work and own the project from discovery through production.

Working software early. A prototype in days, then iterative delivery with regular feedback from the people using it.

Engineers are accountable. AI writes much of the code. An experienced engineer owns all of it: architecture, review, testing and deployment. Senior-led, with specialists when a project needs them.

SELECTED PROJECTS

Geneva migration and data warehouse

A fund moved from in-house Geneva to its administrator's platform. We built the data warehouse and migrated about 50 reports and extracts. Completed in approximately 400 engineering hours, compared with an estimated 1,500 to 2,000 hours using traditional development methods.

Delta Recon

Built a full-featured reconciliation and operational controls SaaS platform in under three months of part-time development. A project that would previously have required a dedicated engineering team. deltarecon.ai

Investran report comparison

Runs reports on both sides of an Investran upgrade, finds the differences and uses AI to classify each one and explain the differences. In use at three large investment firms.

Geneva · Investran · Azure · .NET / C# · SQL Server · Python · Excel / VBA · APIs · Data warehousing
